

To whom it may concern:

As a subscriber to XM Satellite Radio I was appalled to hear that the NBA's petition 04-160 would force XM to stop broadcasting locally oriented content. XM is a service I gladly pay for as it offers unmatched audio quality, national service coverage, and radio content that I enjoy. Local traffic updates are a wonderful tool! I am sure we all wish to avoid getting stuck in traffic going to or from work! I don't understand why I should have to switch back to AM or FM stations to hear this information. Just as I can find local traffic information on the web, or by calling a phone number, I should be able to hear it on XM Radio! I urge the FCC to reject the NBA's petition 04-160.

Regards,
Ben Campbell
